476 The hunter who kills an animal is not forced to share it, nor
224 do the others demand this from him.

Yet it is a natural thing among them, and they cannot conceive of any course of action other than to share the proceeds of the hunt, no matter how small, with everyone else.

727 [127] This same "instinctive" rule also applied to the distribution of plunder following their raids on civilized communities.

628 They have no judges to solve their disagreements, but attempt
[579] to reach a decision first through words and then through a duel.

If a man happens to be killed in the course of such a fight, his close relatives nearly always try to avenge him. Such "vendettas" have often led to the subdivision of the tribe into mutually hostile groups, frequently numerous, which exterminated each other in mass slaughters. This is the main reason for the decimation of this tribe, which used to be quite large and which numbered great quantities of warriors.

531 The Botocudo manifest their artistic taste in the carefully woven spear ornaments which surround the junction of the blade and shaft; in the manufacture of their arrows; and in the embellishment of the small waterproof baskets used within the huts. They also express it in their multicolored linear drawings and the fringes of their aprons, as well as in the ornamentation carved or burned in, which adorn many of their implements.

534 Their gourd rattles are heavily decorated. The handle is
551 covered with a cross-braiding made with the black fibers of imbõ-mirim bark; the base of the gourd is surrounded with multicolored hair and feathers; the gourd itself is covered with carved designs; and the tip of the handle is ornamented in the same fashion as its base.

Like all primitive peoples, the Botocudo are familiar with the rudiments of those sciences directly related to their daily needs.

805 They recognize three yearly seasons: summer (lãmbang), the time of great heat; winter (kotschõma), the time of cold weather; and autumn (kõzõiõ-to-kutãma), the time when trees shed their leaves.

The lunar month is called kutschã and calculated from one full moon to another. Their recognition of seasons provides them with the concept of a yearly cycle; they are also guided by the flowering of certain trees and the ripening of certain fruits.
